

Water Resources Management

MCE is a Missouri based consulting company that has the skills and experience necessary to offer water resources management and planning.

Driven by the Clean Water Act, **MCE** offers water resources permitting services focus on hydrological phenomena such as the movement and distribution of both surface and groundwater. Approaching water from a biological standpoint, **MCE** has the capability to survey rivers, streams, wetlands, and other distinct water bodies to perform appropriate studies.

MCE has the ability to work with clients whose projects may impact nearby water resources and determine quality, quantity, and other aspects so that mitigation, monitoring, and overall management plans can be effectively implemented.

MCE recognizes that many factors contribute to efficient water resources planning. They include sociological, ecological and environmental influences. **MCE** has the capability to develop integrated regional water management plans to address our client's water management challenges in an efficient and effective manner.
